

## Sampler Lecture 1, Duality and the Etheric Magnetic Field

### Questions:

Q1: A great deal of background information is necessary to give a reasoned explanation of how crystals work. What is missing from the discussion of “Duality and the Etheric Magnetic Field”?

Q2: Why is this first lecture missing?

Q3: What is the primary role of the Etheric Magnetic Field?

Q4: What problem is caused by an Etheric Magnetic Field (EMF) that is emanating out from a form that is low and dense?

Q5: What is the consequence to a form of repelling both desirable and undesirable light.

Q6: When light frequencies are split into their negative and positive aspects, what are they trying to do?

Q7: Why does splitting light work?

Q8: What brings the negative and positive aspects together into a whole light frequency? When does this occur?

Q9: The splitting of light to by-pass the etheric field is one innovation to bring light to Earth. Where do crystals participate?

Answers...

A1: The entire first lecture on the splitting of light.

A2: This course and its lectures are a Sampler, as the name implies. The student of the Sampler is inserted into the middle of a discussion to give a sample of the material at-hand.

A3: The Etherics are responsible for attracting and repelling light frequencies to maintain and grow the vibration of its source form, you for example.

A4: The EMF repels light that is undesirable, as it should, but also repels light that is desirable.

A5: With very little light of any kind available for assimilation into the form in question, growth is stopped, stunted, or slow.

A6: The innovation to split light is for the purpose of bringing light across the third dimensional threshold and onto the physical plane.

A7: Splitting light into their negative and positive aspects allows light to by-pass the Etheric Magnetic Field because the field can recognize whole and complete frequencies, but not their negative and positive components.

A8: Polar attraction. Because the two aspects are floating freely within the Earth's etheric field and depends on polarity, coming together can take quite a long time.

A9: There are a number of innovations to help light onto the third dimension. Crystals participate in some of those other innovations. This is a large Body of Knowledge. How many building blocks can you carry in one day?
