

Sampler Lecture 6 Ruby:

Questions...

Q1: How long has Ruby been working on Earth?

Q2: What precipitated the creation of the first chakra?

Q3: What chakra system precedes the 7-chakra system we are familiar with in today's world? And, what chakras are involved?

Q4: Which chakra did Ruby resonate with in ancient times and which does it resonate with today?

Q5: How did Ruby contribute to light assimilation into form in ancient times?

Q6: How does Ruby contribute to light assimilation in today's world?

Q7: What makes Red Light Frequencies valuable in the quest for enlightenment?

Q8: What makes Red Light Frequencies a problem in the quest for enlightenment?

Q9: What aspect of the process acts to effect a reordering of the essence of physical form, and what affect does reordering have on form?

Q10: What has changed that renders Ruby less important in the quest for enlightenment?

Answers...

A1: Since the beginning.

A2: A chance discovery of the light carrying capacity of the physical body led to the creation of the first ever chakra.

A3: The 3-chakra system, consisting of the crown, heart, and base chakras.

A4: In ancient times, Ruby resonated with the higher frequencies of the base chakra. Today, it resonates with the second or pelvic chakra.

A5: Light flowed through physical form, in ancient times, in a single direction with a concentrated flow that was difficult for form to assimilate. Ruby regulated the flow of light frequencies into form, or slowed it down. Through refraction, light frequencies were broken up after which they would radiate outward, rather than flowing in a concentrated stream. Disrupting the flow in a calculated way gave form a better chance of pulling the light frequencies it needed into its space for assimilation.

A6: No change in the way it works.

A7: Red Light Frequencies are valuable in the quest for enlightenment because of their ability to penetrate past almost any resistance encountered within a form.

A8: Red Light Frequencies are a problem in the quest for enlightenment because of their ability to penetrate past almost any resistance encountered within a form.

A9: Physical form is reordered by the influence of Ruby's incoming light following the refraction and radiation of the flow of light. Reordered form receives light for its greater empowerment, which translates into functioning at a more optimum level. The empowered form is better able to attract and repel the light it needs to thrive.

A10: Ruby works at its best with form that is low and dense and impervious to the assimilation of light. What has changed is the general vibration of form. Form vibrates at a much higher level in today's world. It no longer carries the density that

blocks the assimilation of light. The penetrating power of Ruby's red light frequencies is no longer necessary to open form to light.
